**Jawablah pertanyaan dibawah ini dengan lengkap dan tepat ! (100)**

1. Explain about the process of Drug Use Evaluation! (15)
2. Make a counseling plan for patients who receive drugs that use insulin pens based on the stages of counseling! (20)
3. List and give examples of medication errors in any health facilities! (20)
4. Mrs. T, 70 years old, was hospitalized for diabetes mellitus with gout complications. He has been in the hospital for almost 2 weeks. While receiving treatment at the hospital, the patient received oral anti-diabetic drugs and diclofenac sodium to treat his gout. It turned out that the patient experienced side effects from using diclofenac sodium, namely bleeding in the digestive tract which was characterized by melena. This is known from the patient's family who reported this to the nurse when changing the patient's infusion. The nurse immediately reported this incident to the pharmacist to solve the problem. As a pharmacist, what drug information services can you convey to patients or the patient's family related to the patient's condition ! (sertakan jawaban PIO anda saat menyampaikan hal tersebut kepada pasien atau keluarga pasien) (45)
